

Newton Toney Groundwater Level 2023-24

Groundwater Report 1-Apr-2024

The groundwater has started to fall again after the extremely heavy rain at the end of March and is now 11 in (27cm) below. The local total rainfall for March was twice the LTA. The Bourne has also fallen again and is now lower than it was last Monday. With the ground remaining saturated any significant rain will cause both the Bourne and groundwater to rise rapidly. Next report due: w/b 8-Apr-2024
